**UpToDate**

UpToDate is an evidence-based clinical decision support resource which provides specific recommendations for clinicians. UpToDate comprises of thousands of original topic reviews written by a recognised faculty of experts who each address a specific clinical issue. UpToDate resources cover internal medicine and subspecialties, obstetrics and gynaecology, family medicine and paediatrics, a drug database is also included.

**Access**

Select ‘U’ for UpToDate from the alphabetical list under E-resources & databases on the ANU Library homepage http://anulib.anu.edu.au/

Please note, UpToDate is available to ANU staff and students on the ANU campus, and via remote access for ANU students only.

**Searching**

UpToDate has a simple search box. Once you have searched for a topic the results will include the result names together with links to key sections within the article.
On the left side of the screen, you will see the Topic Outline and can select links to the most relevant sections of the article.

Search tips

UpToDate;

- recognises common synonyms, abbreviations, acronyms and word roots
- automatically searches across all specialties.

Practice Changing Updates

This section shows research results with important and/or immediate implications for how clinicians practice.

The latest updates are listed in reverse chronological order.
